## TECHNIA Integration Framework

*Take PLM integrations for enterprise systems to a whole new level when it comes to configurability, maintenance, and low cost of ownership.*

EXPERIENCE MATTERS

Productivity, adoption, configurability & in-app training

-  Value Components
-  Light My Way

Quality standards, optimized comparisons and Legal standard compliance

-  CAVA
-  Q-Checker
-  xCompare

Supplier collaboration and lightweight applications

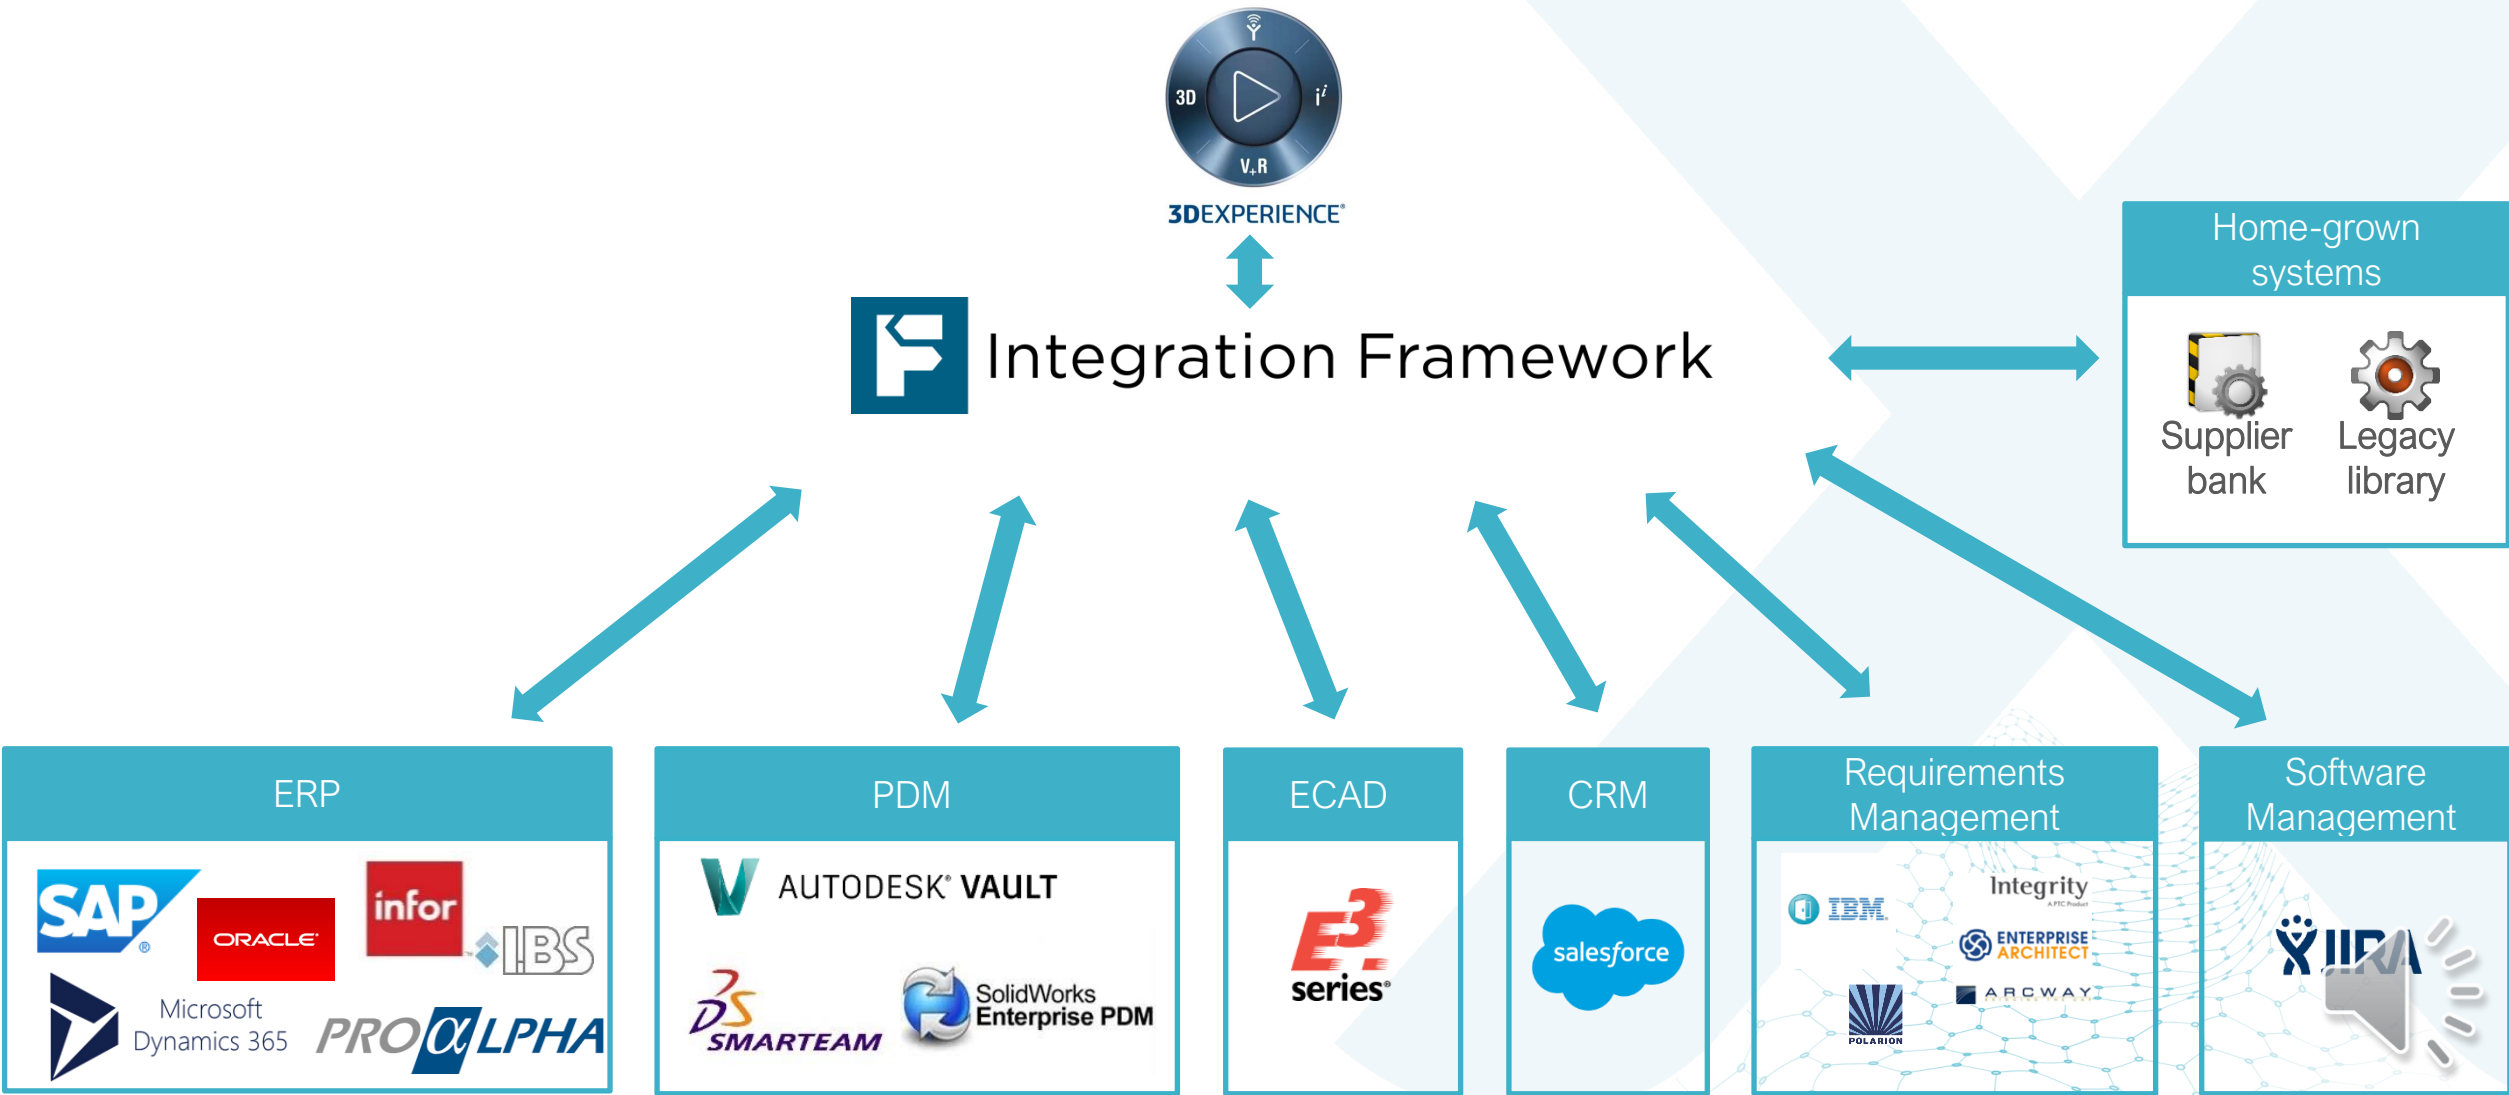

-  Lite3D
-  Exchange Hub

Operations Excellence, System Tuning, Client distribution, Configurable & Scalable Enterprise Integrations

-  myPLM
-  Value Tools
-  Integration Framework

# One solution covering all 3DEXPERIENCE integration needs

# MAKING SYSTEMS INTEGRATIONS SUSTAINABLE

## Effort

- Simplify 3DEXPERIENCE integrations
- Configure 90% of your needs
- Templates and examples
- Connectors for quick deployment
- Extendable framework

## Reliability

- Take control over your data
- Guaranteed delivery
- Scalability
- Streamline error resolution
- Logging, statistics and analytics

## Cost

- Supported software
- Upgradability
- Re-use
- Quality
- Documented methodology

# MAKING SYSTEMS INTEGRATIONS SUSTAINABLE

Effort

Performance

Reliability

Taking control

Operations  
efficiency

Cost

Simple  
upgrades

Increase  
availability

# Common challenges with custom integrations

1. Implementation projects are time consuming and expensive

3. Operations are costly due to ineffective error management

5. System upgrades drives extra cost and a solution matching the new version could be needed

7. Missing messages causing costly problems downstream

2. Integration process steals application server performance causing instability and problem to scale

4. Adapting to changes within the enterprise landscape is slow and costly

6. Integration downtime prevents PLM users from using the system

# Challenges integrating enterprise systems

## One Partner

Implementation projects are often risky, time consuming and expensive

## Standard Solution

Upgrades of surrounding systems drives integration costs

## Multiple options (On Prem/Cloud/Hybrid)

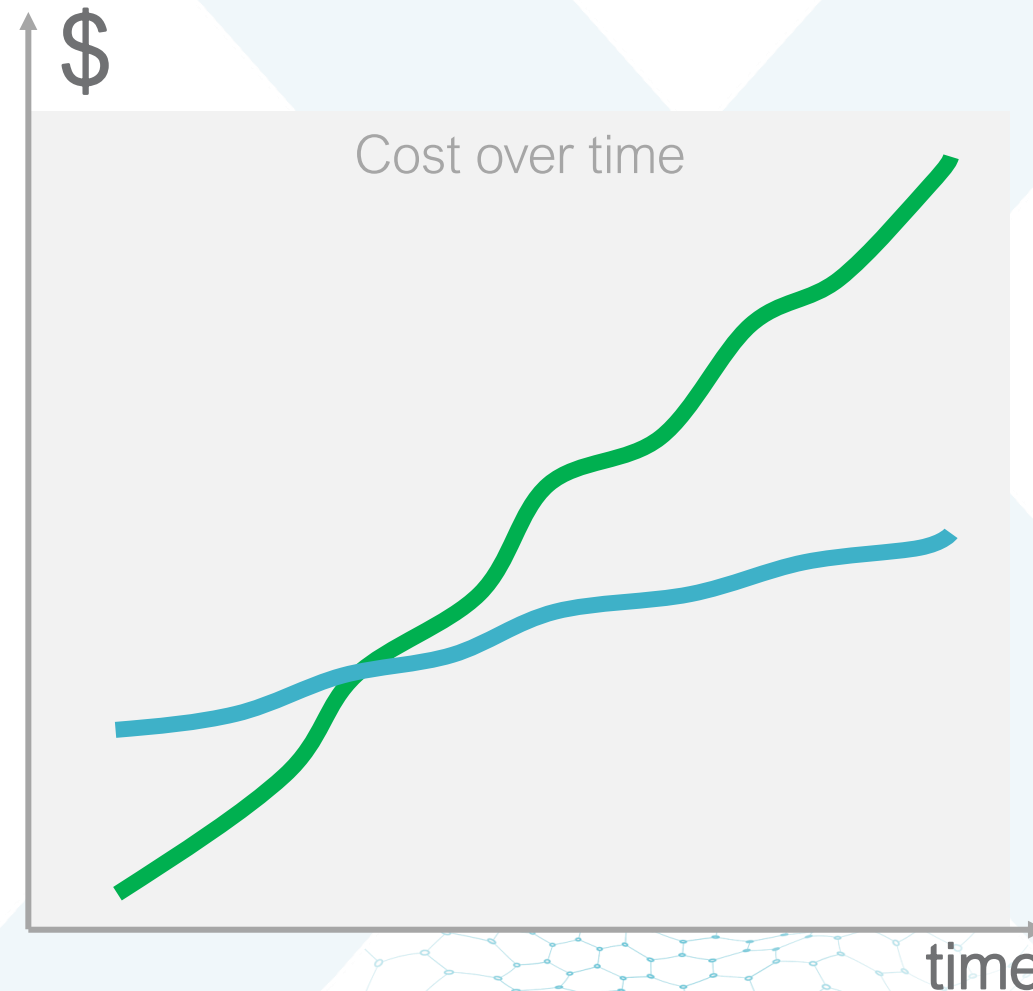

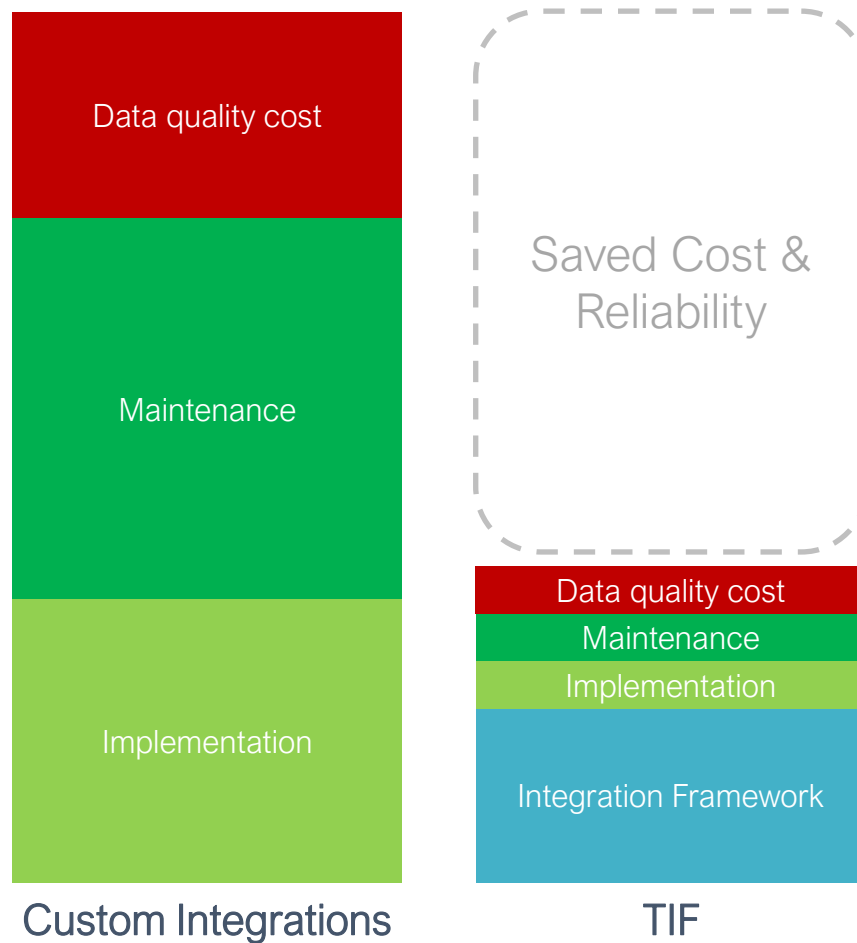

Ensure sustainable integration landscape

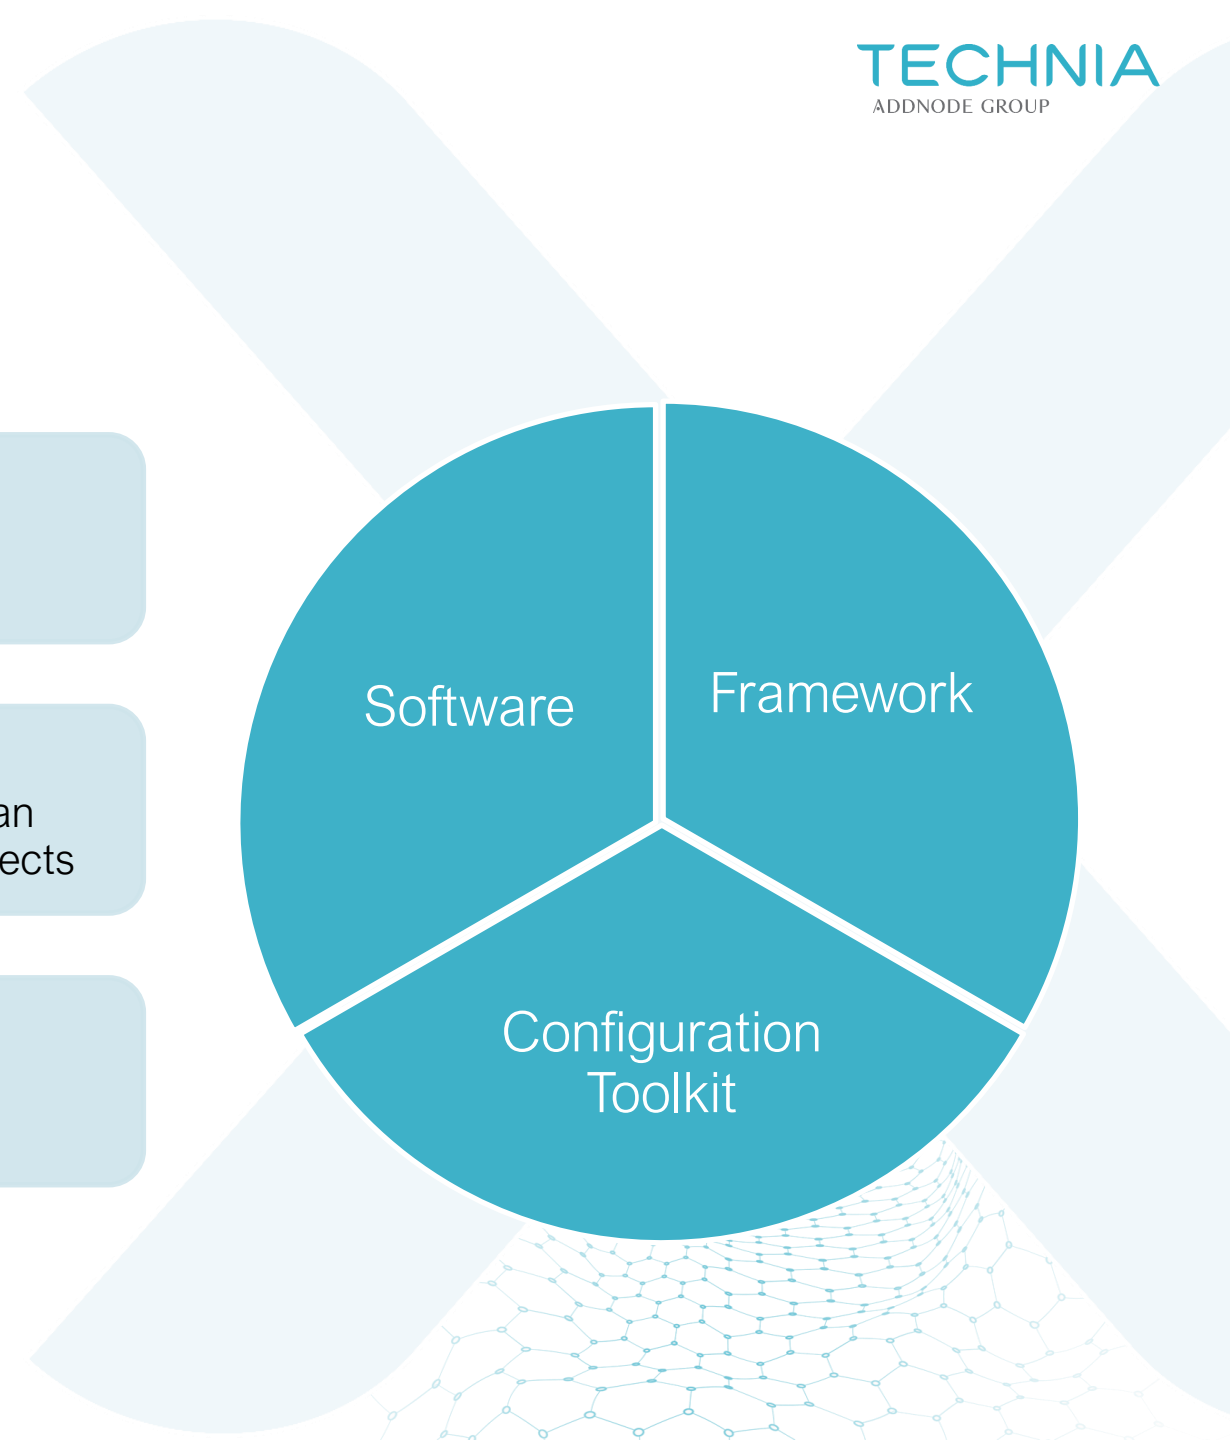

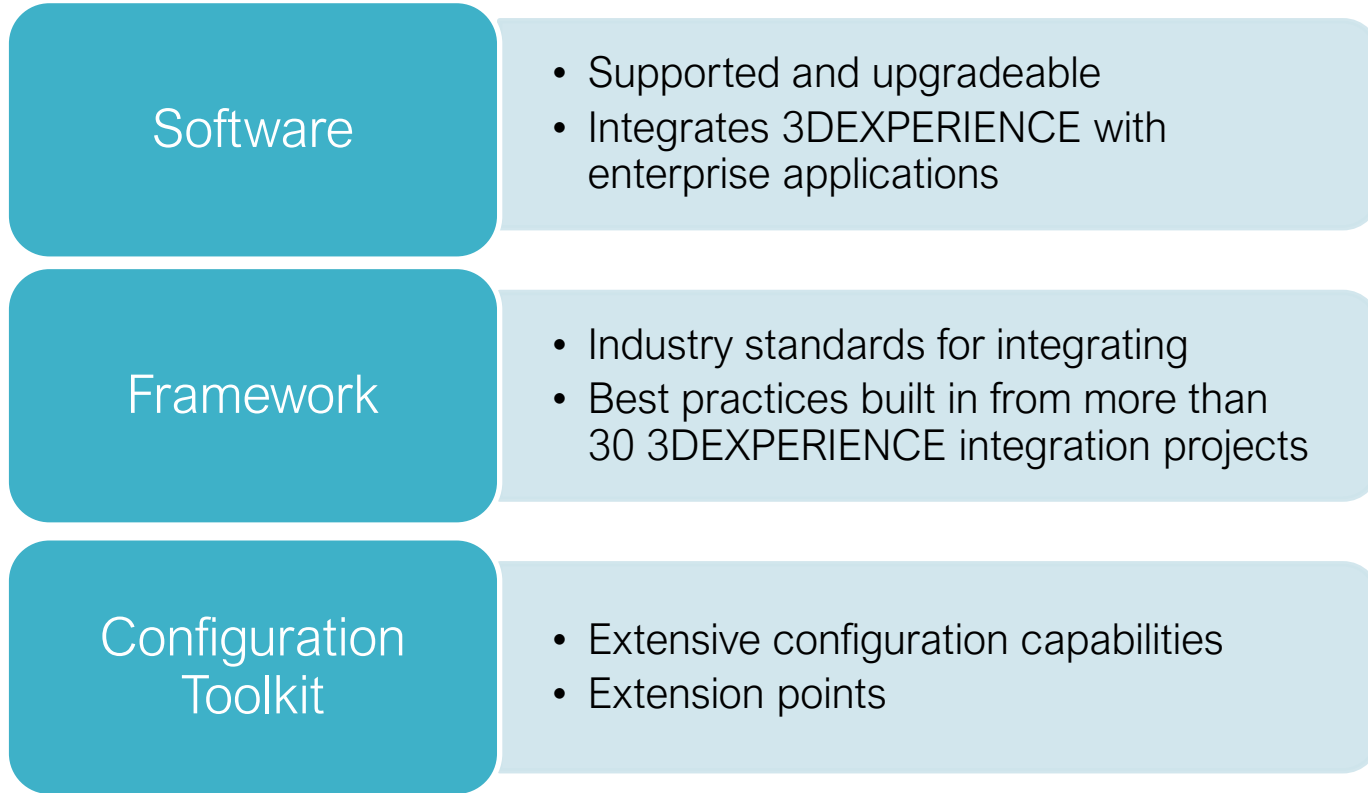

# Return on Investment - ROI

Integrations typically continuously generate costs. A PLM lifetime perspective is important to guaranteed a quick ROI and general PLM success. TIF ROI is normally between 6 months and 2 years without considering the cost disturbances and quality can have for the business.

# The Basics

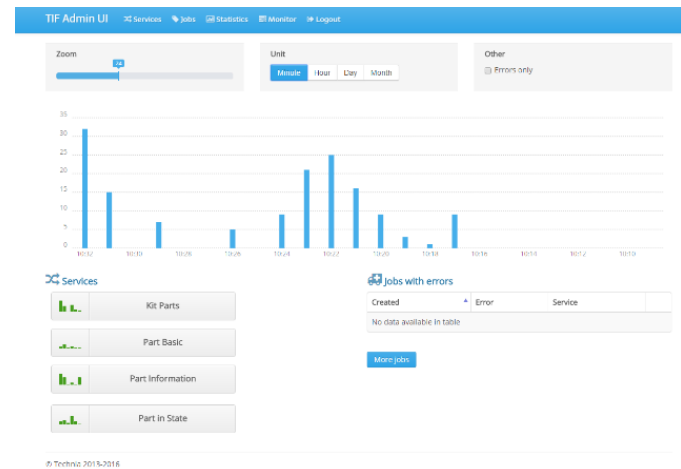

# Admin UI providing full control

## Statistics

- Usage statistics per integration
- Current processing integration jobs
- Success/error rates

## Maintenance

- Search
- Stop / pause integrations
- Error tracking and follow-up
- Resend / process failed integration jobs
- Track resources and scale up in time

The screenshot shows the 'Jobs' page in the TIF Admin UI. It features a navigation bar with 'Services', 'Jobs', 'Statistics', 'Monitor', 'Configuration', and 'Logout'. Below the navigation, there are buttons for 'All', 'In Progress', 'Awaiting Reply', 'Completed', and 'Errors'. A search bar is present. A table displays job entries with columns for 'Started', 'Service', 'Object', and 'Status'. The table includes pagination controls and a 'View' button for each entry.

Started	Service	Object	Status	View
2017-01-18T13:47:49	RabbitMQTest		Succeeded	View
2017-01-18T13:46:58	RabbitMQTest		Succeeded	View
2017-01-18T13:43:19	RESTTest		Succeeded	View
2017-01-18T13:39:20	SOAPTest		Succeeded	View
2017-01-18T13:38:36	PartBasic	Part test_name_1_1	Succeeded	View

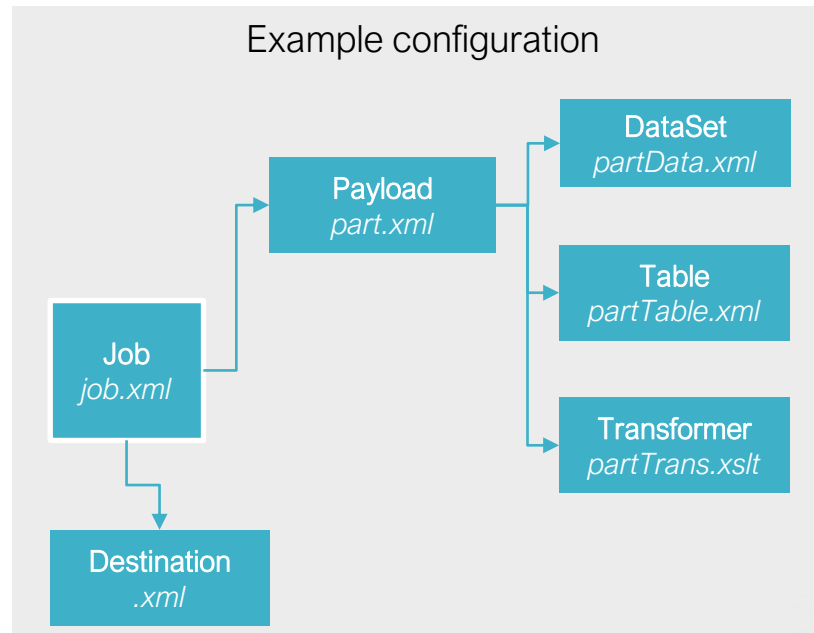

The screenshot shows the 'Configuration' page in the TIF Admin UI. It features a navigation bar with 'Services', 'Jobs', 'Statistics', 'Monitor', 'Configuration', and 'Logout'. Below the navigation, there is a 'Log Settings' section with 'Runtime Log Levels' for various components. A dropdown menu is open for 'logback.xml', showing options like 'DEFAULT', 'ALL', 'DEBUG', 'ERROR', 'INFO', 'OFF', 'TRACE', and 'WARN'.

# Fully Configurable Integrations

Reduce the amount of custom integration code with supported configurations

```
public class TcpClientSample
{
    public static void Main()
    {
        byte[] data = new byte[1024];
        TcpClient server;
        try{
            server = new TcpClient("...", port);
        }catch(SocketException ex){
            Console.WriteLine("Unable to connect to server");
            return;
        }
        NetworkStream ns = server.GetStream();
        int recv = ns.Read(data, 0, data.Length);
        string data = Encoding.ASCII.GetString(data, 0, recv);
        Console.WriteLine(data);
        while(true){
            input = Console.ReadLine();
            if (input == "exit") break;
            newchild.Properties["ou"].Add(
                ("Auditing Department");
            newchild.CommitChanges();
            newchild.Close();
        }
    }
}
```

```
<Job> <!-- job.xml -->
<TransferData>
  <Payload>tvc:payload/part.xml</Payload>
  <Destinations>
    <SysOut/>
    <File id="file-1"/>
    <Http id="http-1"/>
    <RabbitMQ id="rabbitmq-1">
      <RetryAttempts>10</RetryAttempts>
      <RetryDelay>5000,10000</RetryDelay>
      <Header name="type"
        value="{rpe:TYPE}"
        type="string"/>
    </RabbitMQ>
  </Destinations>
  <OnError>
    <SendMail>
      <TO>...</TO>
      <Subject>...</Subject>
      <Message>message.. ${STACK_TRACE}</Message>
    </SendMail>
  </OnError>
</TransferData>
</Job>
```

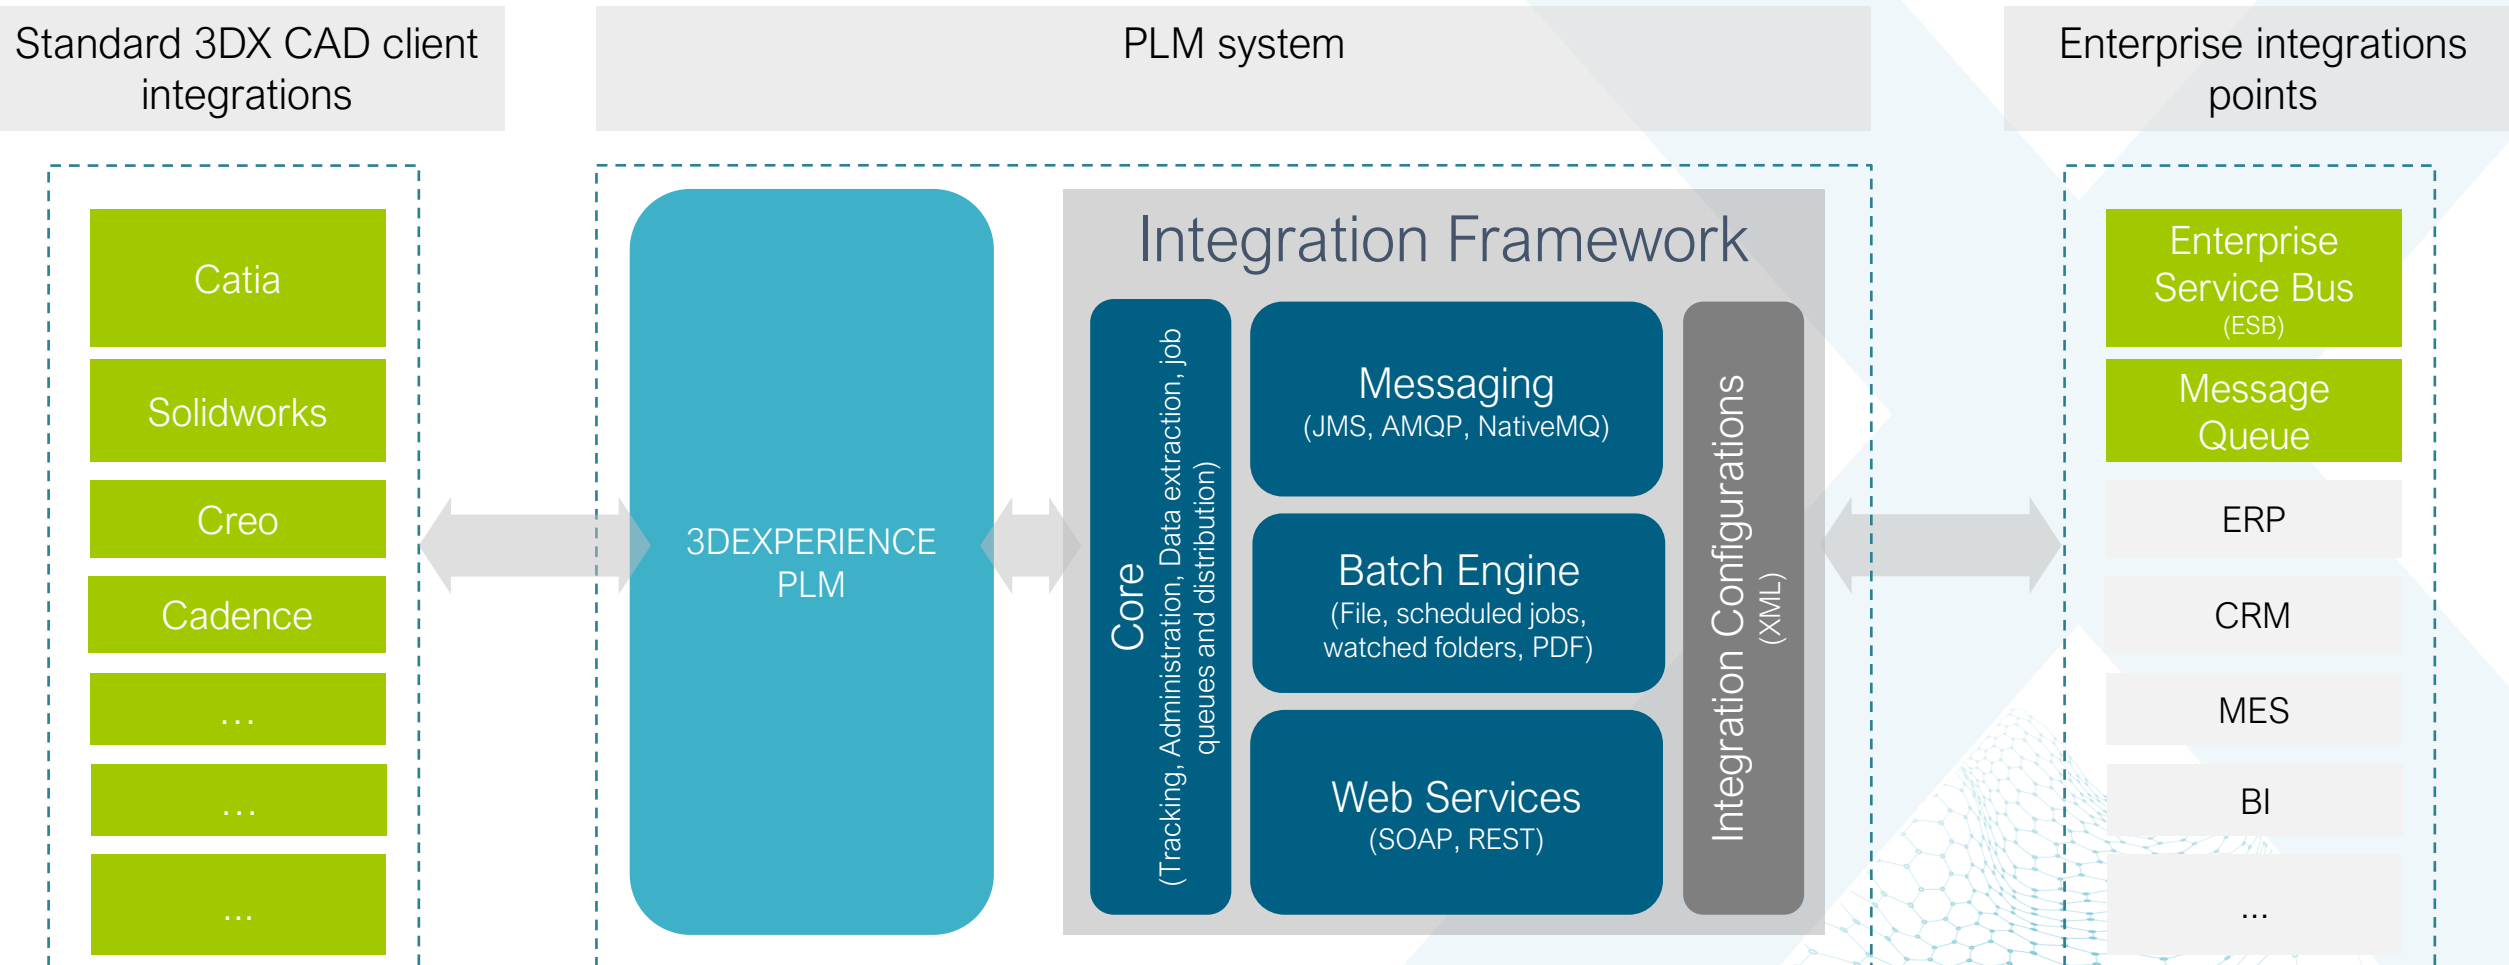

```
<Payload> <!-- part.xml -->
<!-- Use custom Java class -->
<JavaContent className="my.Payload"/>

<!-- Use a table with data set -->
<TableContent>
  <DataSet>tvc:dataset/partData.xml</DataSet>
  <Table>tvc:table/partTable.xml</Table>
</TableContent>

<!-- Transformation of data -->
<Transformer xslt="tvc:xslt/partTrans.xslt"/>

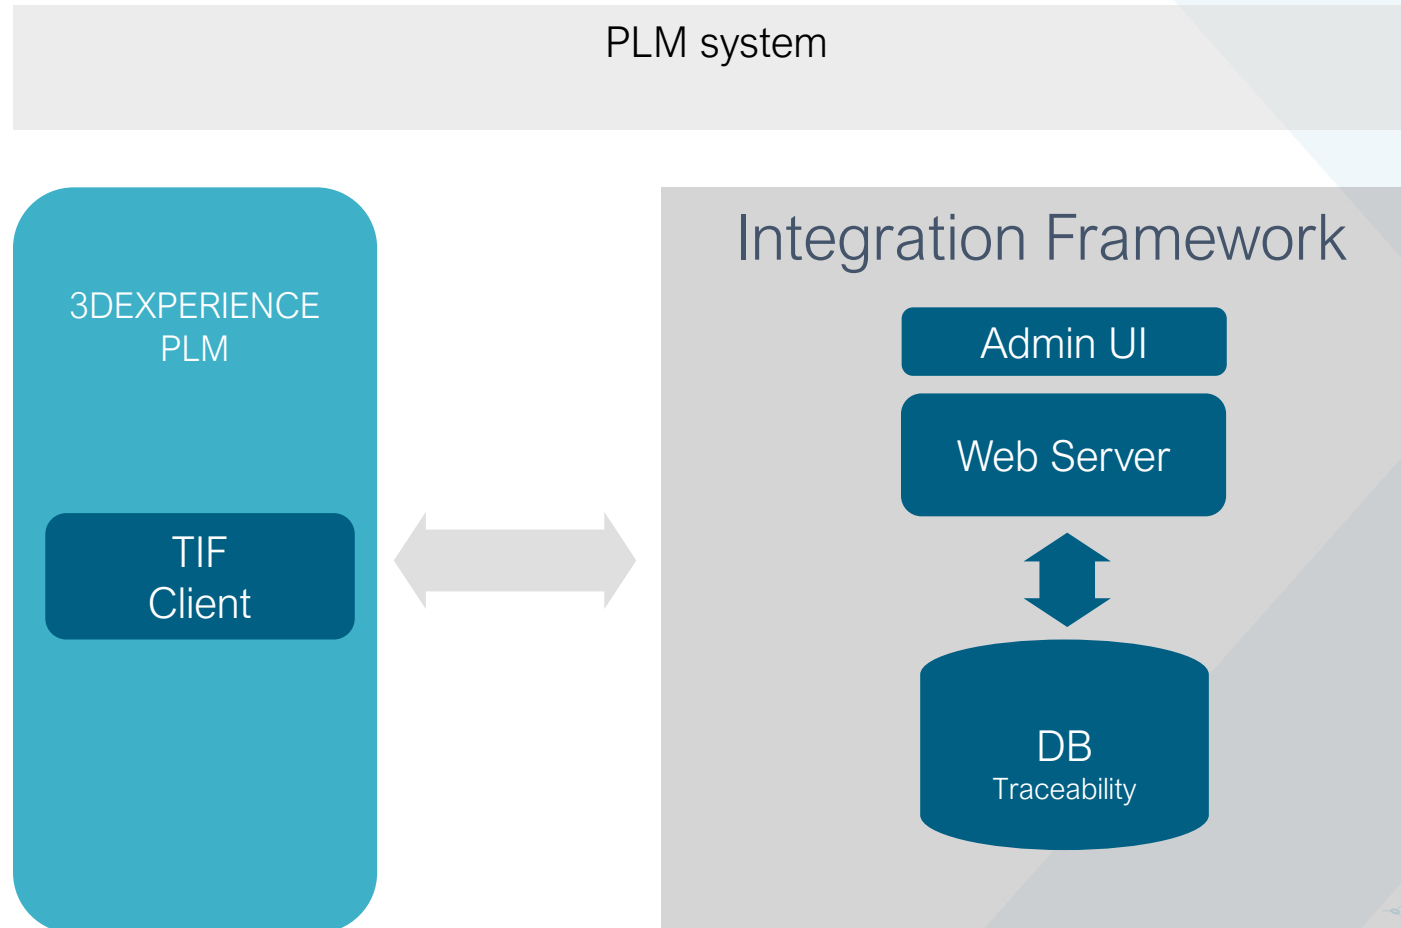

<!-- Validation of data -->
<Validator schema="tvc:xsd/partTrans.xsd"/>
</Payload>
```

# Positioning within the enterprise landscape

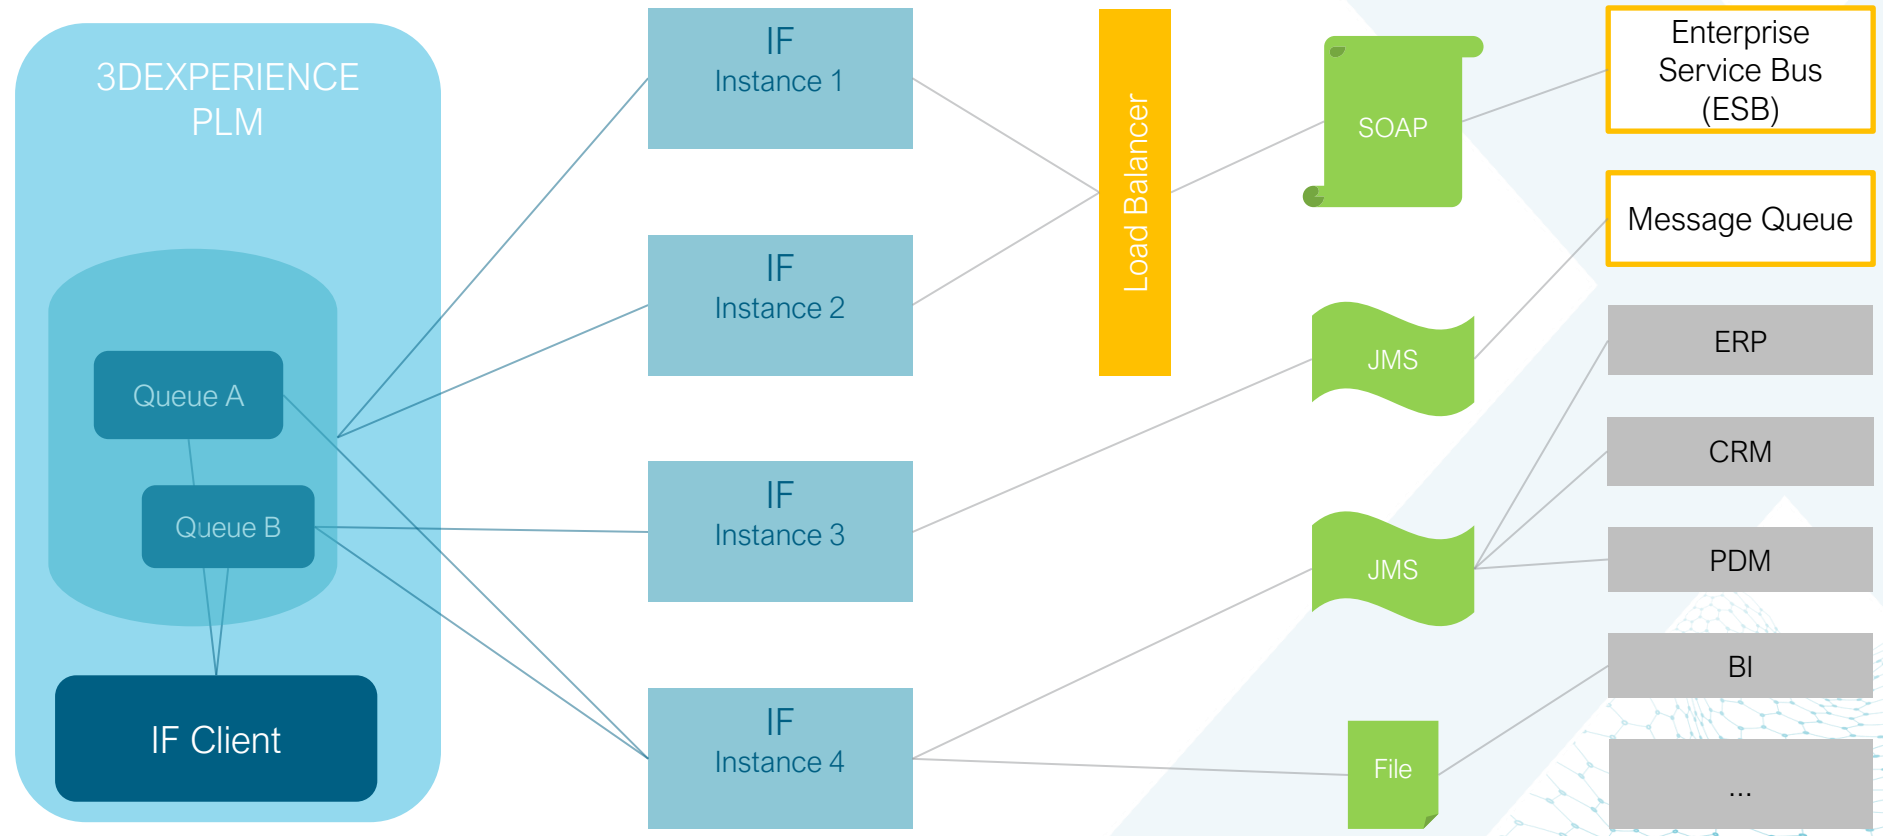

# Performance and Traceability

Decoupled architecture with limited footprint on 3DEXPERIENCE system and boosted with internal DB and search engine guaranteeing full traceability of all ongoing and processed jobs.

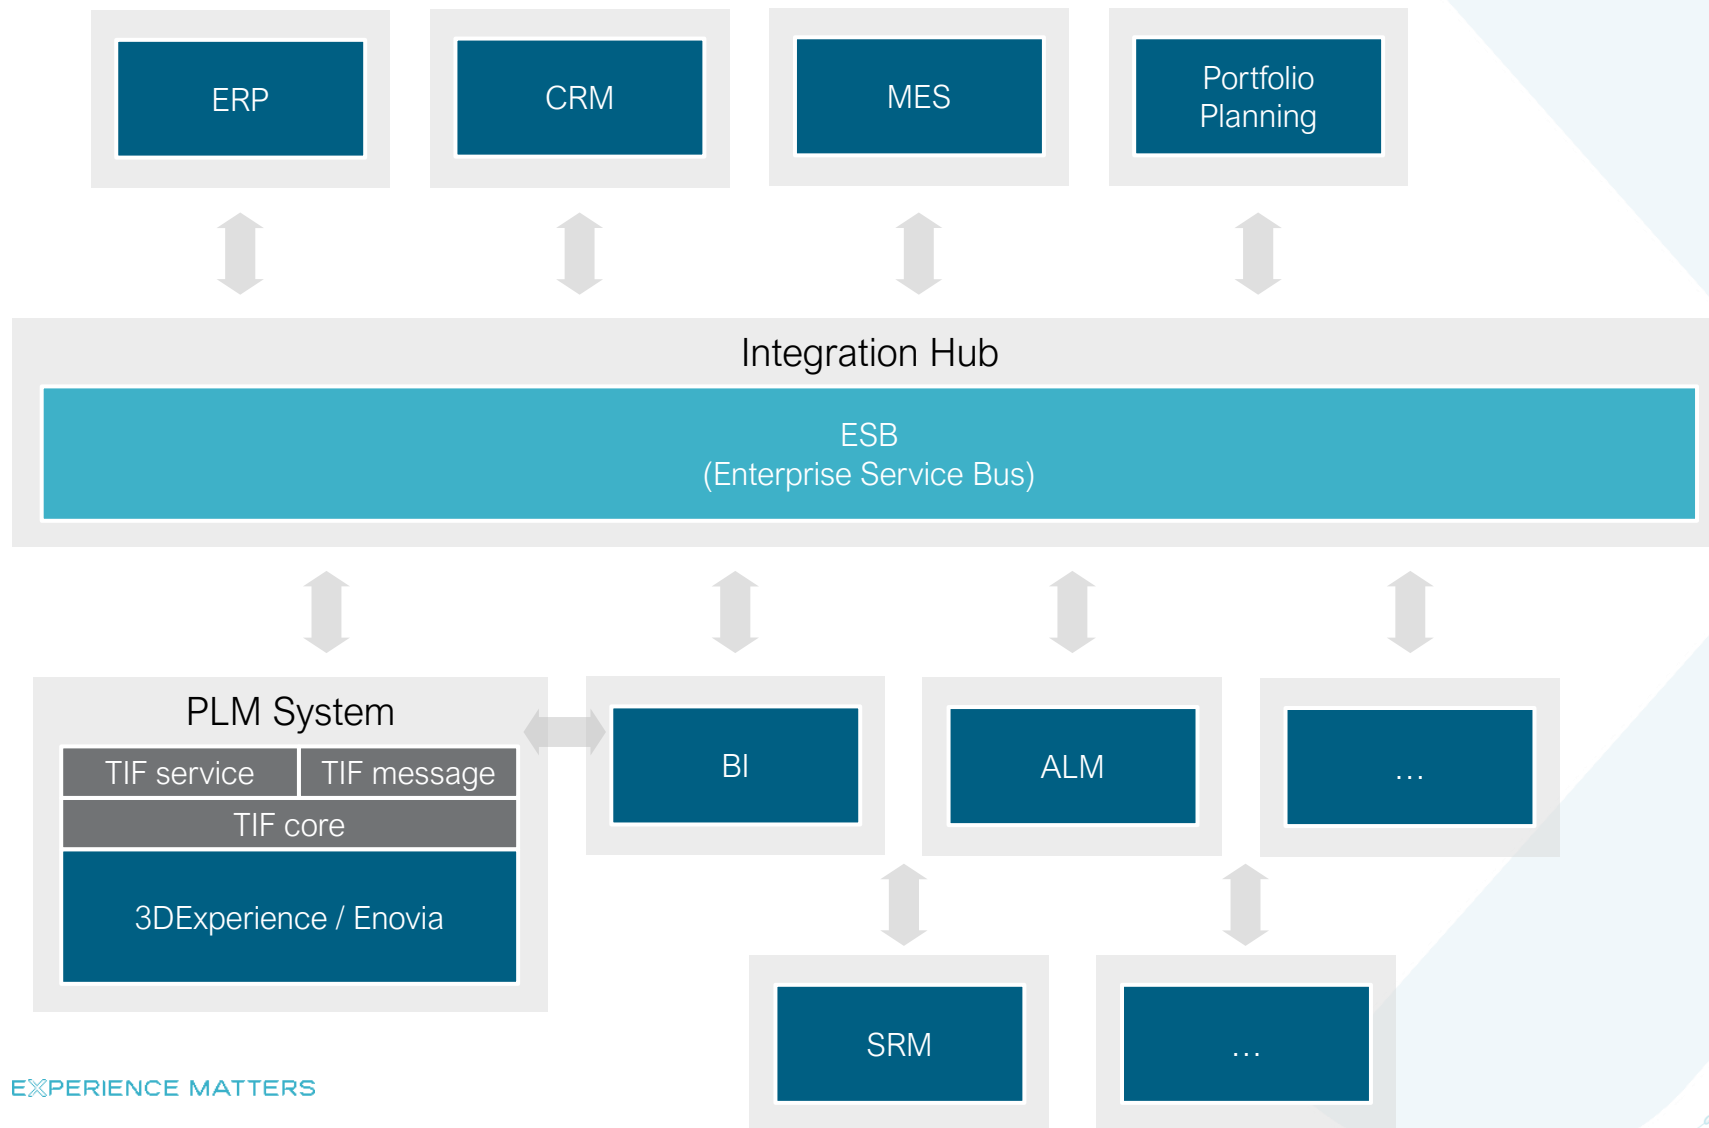

# Scalability

Decoupled architecture designed to support unlimited horizontal and vertical scaling for your global and local needs.

# Preferred enterprise integration landscape architecture

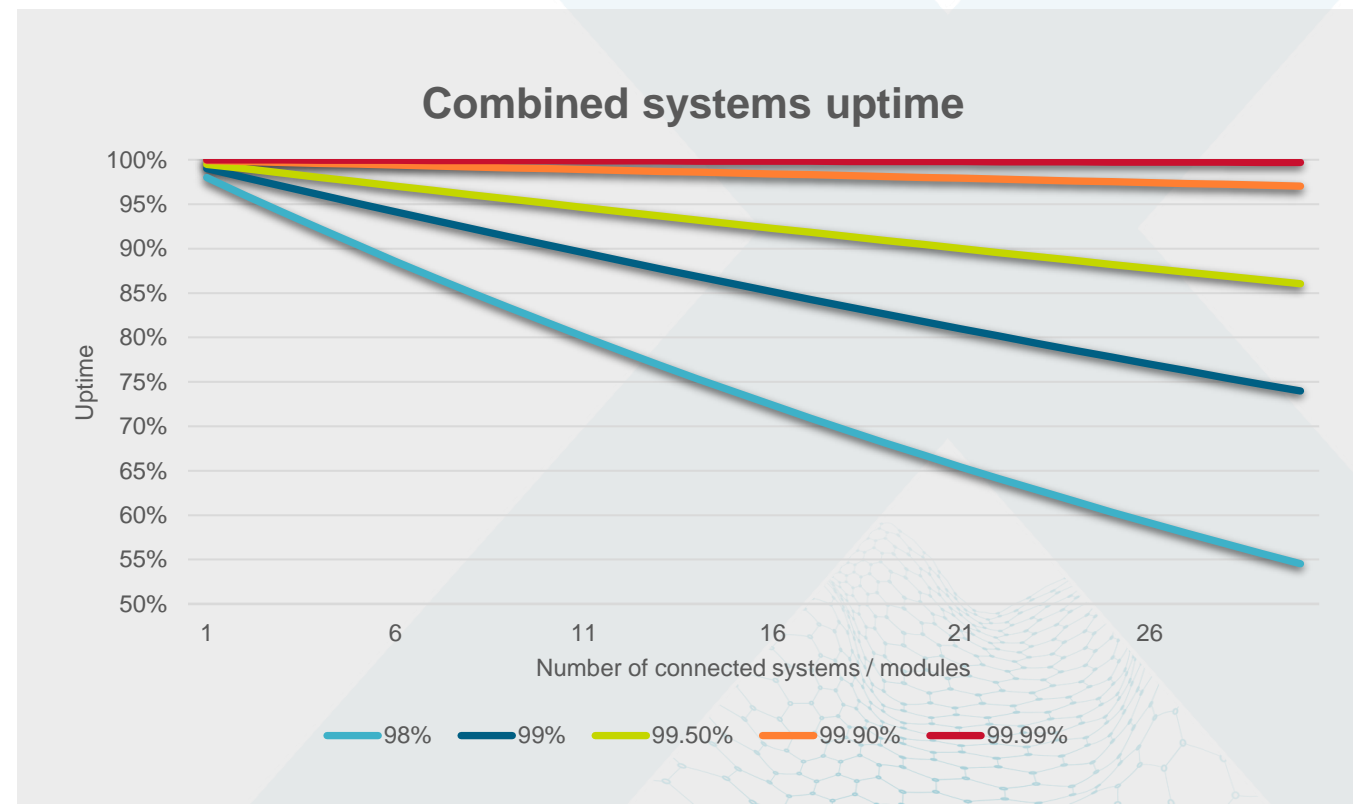

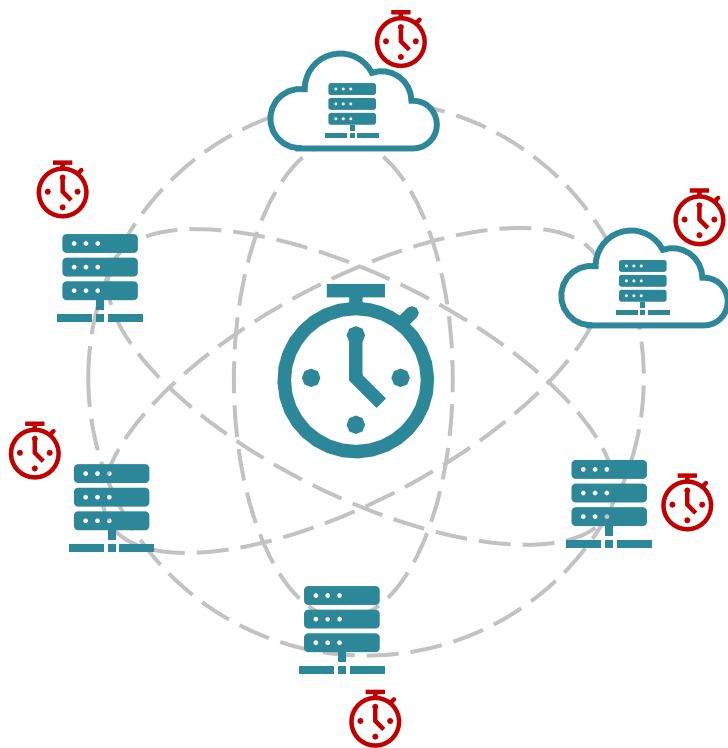

## High-level recommendations

- 'Real-time' integrations. Avoid batch.
- Decoupling of systems. Limit peer-to-peer connections.
- Combination of *service* and *message* based integrations depending on
  - kind of data
  - usage of data
  - System uptime
- Strict ownership of data. No shared ownership.

## System uptime

- Choosing the correct integration type
  - Number of connected systems or modules
  - Uptime on connected systems and modules
  - Use case and need

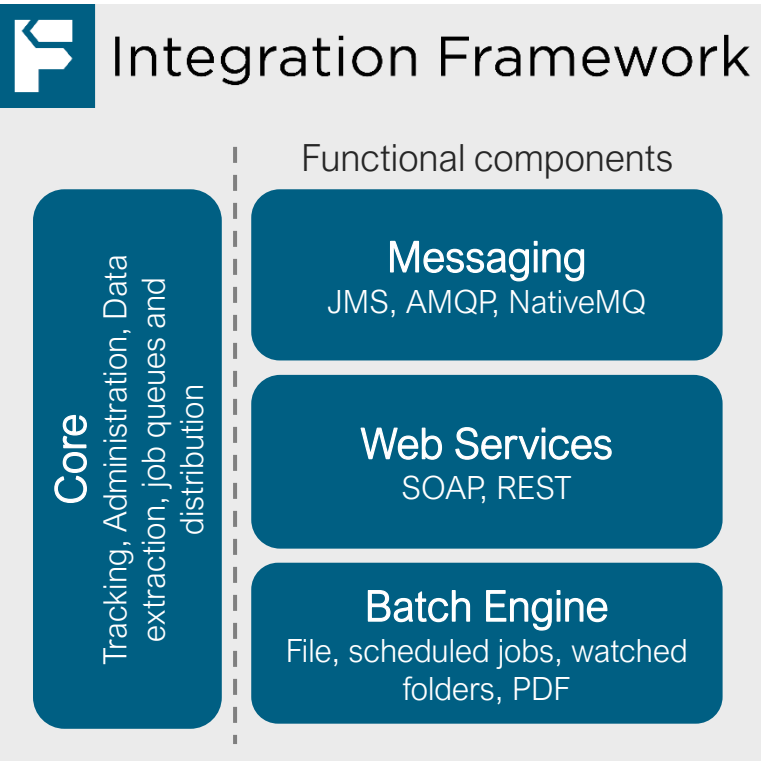

# Connector concept

Starter kits to speed up integration deployment for processes, systems and tools

# SAP Connector – Technical set-up

Example contents of a Connector

## ERP Connector – Use case overview

- Partner with Implema for the SAP side of the integration

Use Case	Description	SAP ECC S/4 Hana	SAP Azure Cloud	SAP PO
<b>Create Part/Material</b>	Creates material in ERP and returns Part number to PLM	✓	✓	✓
<b>Send EBOM</b>	Sends EBOM to ERP with specifications	✓	✓	✓
<b>Release Document</b>	At document release workflow Create PDF and link to PDF to ERP.	✓	✓	✓
<b>Update attribute from PLM</b>	Event triggered update of attributes to ERP	✓	✓	✓
<b>Clone Part</b>	Clone Part in 3DX with references	✓	✓	✓
<b>EBOM Sync</b>	Create EBOM Synch Parts and BOM	✓	✓	✓
<b>Create Physical Product/Material</b>	Creates material in ERP and returns Physical Product number to PLM	✓	🎯	✓
<b>Send Physical Product BOM</b>	Sends EBOM to ERP with specifications	✓	🎯	✓

Collaboration

# Purchase options

Price is based on the number of 3DEXPERIENCE users

## As a bundle

The product can be used for any number of integration points using any functional component

## By functional component

The product can be used for any number of integration points using the selected component

- Service based data exchange
- Message based data exchange
- Batch job execution

## Token based

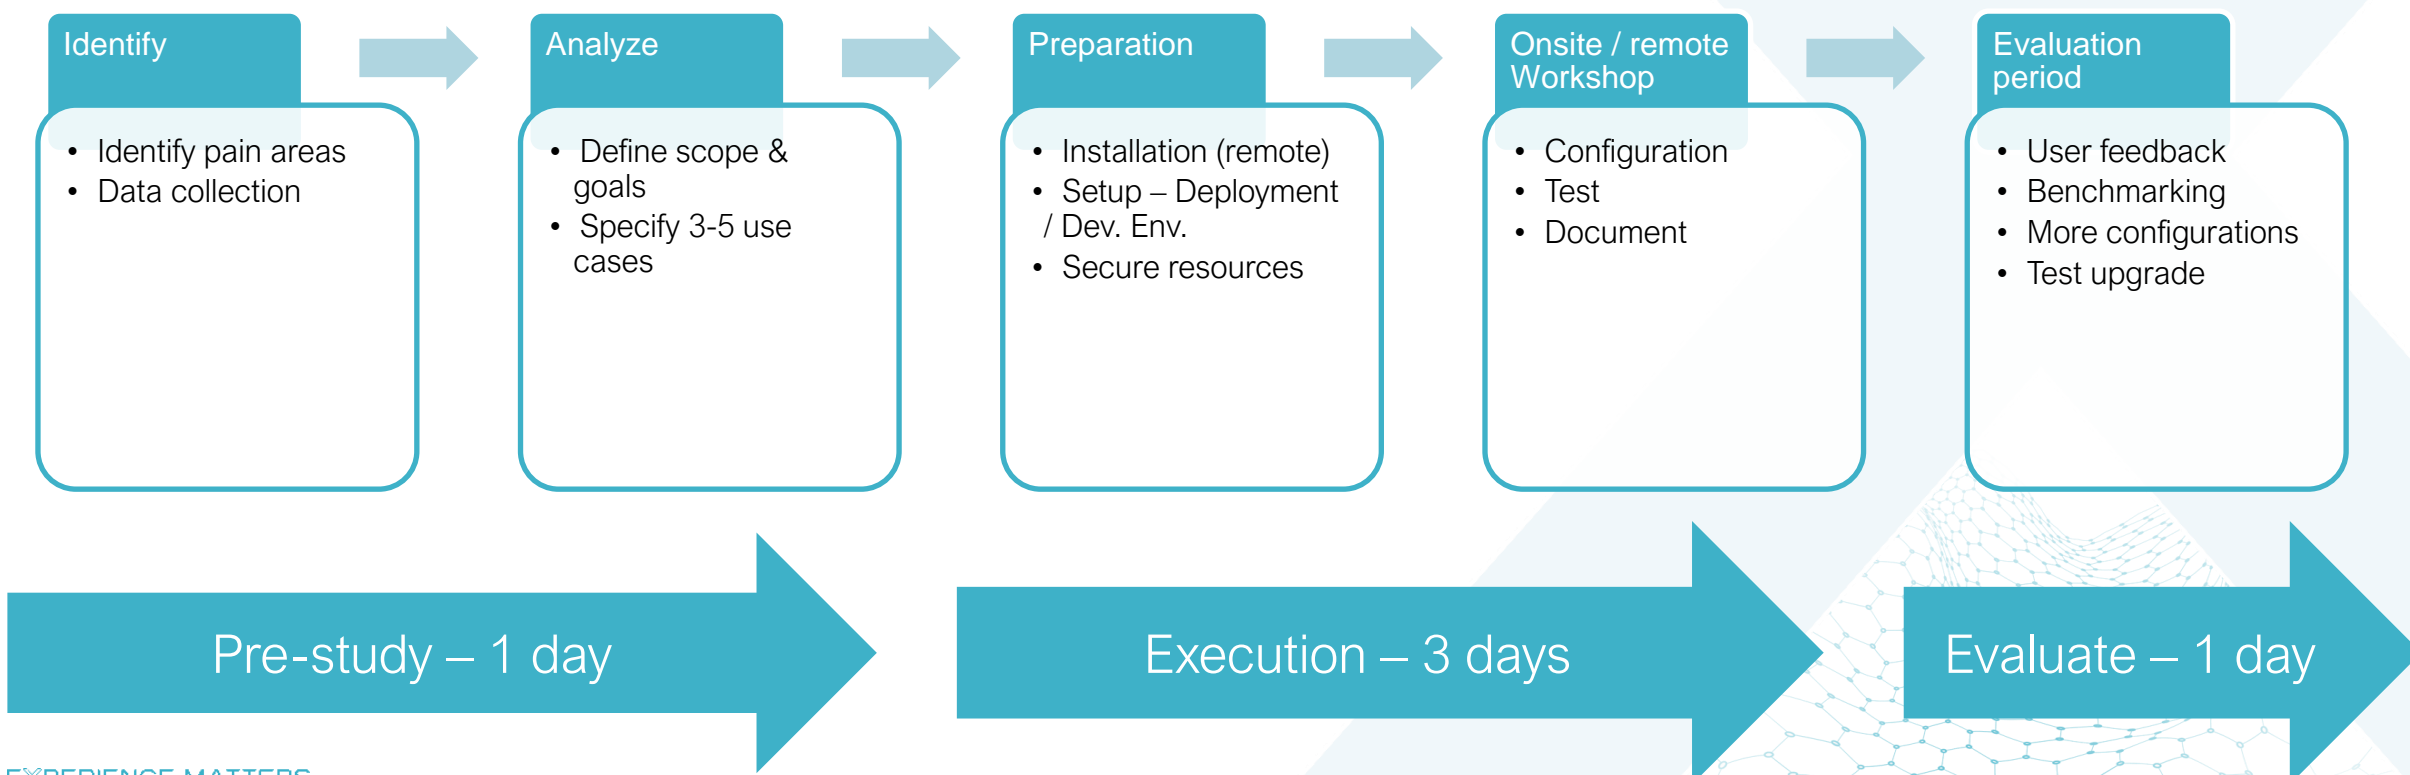

One token gives the right to create one integration point using any of the functional components

## As a Connector

The product can solely be used for the purpose of the Connector

## Proof of concept offering – PoC

- First steps to better understand the benefits
- Fixed price offering
- Free trial licenses

# Reference examples

## Usage

- 50+ customers
- All industries

## Integrated systems

- ERP systems
- BI systems
- Various enterprise systems
- Custom build systems

## Integration techniques

- Bi-directional integrations
- Service based data exchange
- Message based data exchange
- Batch jobs
- Synchronous and asynchronous jobs

# TECHNIA

At TECHNIA, we pave the way for your innovation, creativity and profitability. We combine industry-leading Product Lifecycle Management tools with specialist knowledge, so you can enjoy the journey from product concept to implementation.

Our experience makes it possible to keep things simple, personal and accessible so that together we transform your vision into value.

With over 30 years' experience, more than 6000 Customers worldwide and World-class knowledge in PLM & Intelligent Engineering, we work together as an extension of your team to create an exceptional PLM experience.

Our teams work from 21 locations around the world, across vertical industries, delivering a premium service with a global infrastructure and a local presence. We adopt the latest technology and agile methodologies so, even as technology changes, our relationships last a lifetime.
